Mr. Scott holds a bachelor degree in civil engineering from the University of Evansville and is a senior engineer at Burns & McDonnell, an engineering consulting firm out of Kansas City, Missouri. Over the last 10 years at Burns & McDonnell, Mr. Scott has focused extensively on water distribution system master planning, hydraulic evaluations of water system components, design of storage and pumping facilities, hydraulic modeling, and UDF program development. Over the last 5 years, Mr. Scott has also led these efforts in a project management role. Mr. Scott is a registered professional engineer in Kansas.

Mr. Scott and his wife, Lindsay, are awaiting the arrival of their first son in November 2013. Much of their time, as of late, has revolved around the preparation of their new arrival, most notably managing her spending between Pottery Barn for Kids, Land of Nod, and Baby Gap and dealing with his realization that her opinion trumps all. Outside of that, their time is happily spent with family and friends at BBQs, visiting local art fairs, theater, and concerts.
